

Sparking

a transformation in electric fencing

Fencing News showcases the Tensulator from Gripple

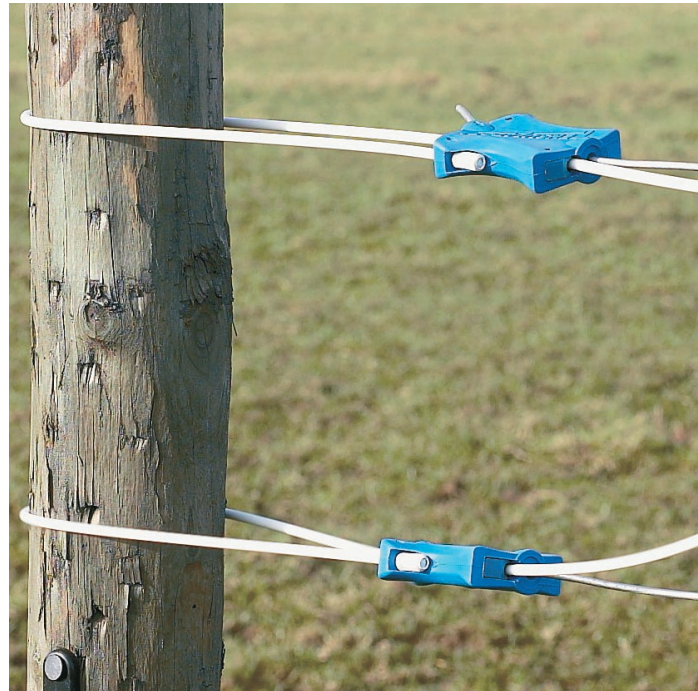

Formed in 1988, Gripple has already sold in excess of 125 million products worldwide, making them available in more than 50 countries. Yet it's the company's latest offering, the Tensulator, that looks set to spark an electric fencing revolution by combining four functions in one - saving farmers' time and money.

Produced and manufactured by Sheffield-based Gripple, the organisation behind the worldwide success of the Gripple Wire Joiner, the Tensulator joins, tensions, anchors and insulates electric fencing. It eliminates the need for separate end post insulators and permanent wire

strainers, making it easier to use and four times faster to install than traditional methods. The product is being distributed by Rutland Electric Fencing, the UK's biggest electric fencer.

George Cooper, Gripple's product manager - agriculture, said: "We are confident the four-in-one Tensulator will revolutionise the electric fencing industry. Its ease of use means there is no need for bending and twisting awkward wires, making installation safer for farmers and extending the life of the wire.

Martin Armstrong, general manager of Rutland Electric Fencing, said: "Gripple have come up with an

innovative idea which is set to bring a revival to the permanent electric fencing market."

Leading agriculture, equestrian and fencing contractor Nick Denniff, from North Derbyshire-based Lydgate Hill Fencing, has given the Tensulator the thumbs-up. Nick, a former Tornado High Tensile Stock Fencing Competition champion, said: "The tensulator is a

versatile and winning way of insulating and wiring up high tensile wire - whether short or long lengths."

Tensulators are available in cartons of 100 units or individual cards of 10 units.

For further information, call George Cooper on 0114 275 2255, email info@gripple.com or visit www.gripple.com.

**FASTER, EASIER, SAFER AND
MORE COST-EFFECTIVE
with the revolutionary NEW**

**ELECTRIC FENCING
TENSULATOR®**

**The device that
JOINS, TENSIONS,
ANCHORS and
INSULATES -
4 IN ONE**

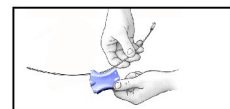

- 4 times faster - the Gripple Tensulator system is installed four times faster than traditional methods.
- Easy to use - no more bending and twisting awkward wires (no more cutting hands).
- Ideal for all strains of fence.

- Can be tensioned and re-tensioned.
- Non corrosive components for insulation and longer life.
- Recommended wire range: 2.00 - 3.15mm mild steel, high tensile.
- Working Load 200kg

IT'S EASY TO FIT

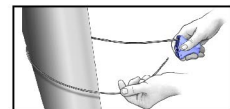

INSULATES

Feed the longest part of the monofilament through the anchor-point until it locks.

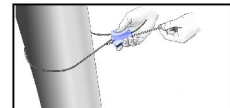

ANCHORS

Wrap the monofilament once around the end post and through the second channel.

JOINS

Feed the wire through the Tensulator's purpose designed hole.

TENSIONS

The fence line can be quickly and easily re-tensioned using the Tensulator Tool.
